AIRCRAFT CARPET KITTING

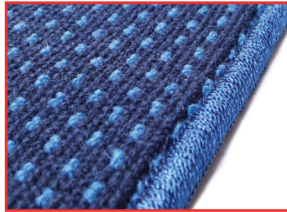

Autostop Aviation supply a carpet kitting service for airlines.

In line with continuous improvement and supply chain management efficiency, we deal directly with the carpet manufacturer to arrange the carpet to be delivered directly to our facility.

The carpet is then cut by one of our many CNC laser cutting machines into the aircraft type cutting files. The carpet is then sent to our overlocking area for the edges bound and packed into kits ready for delivery to the maintenance Hangars.

Overlocking

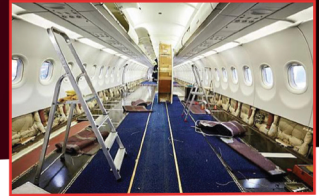

TOTAL CARPET MANAGEMENT (TCM)

Some of our airline customers enjoy our total carpet management (TCM), service.

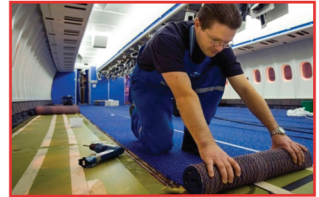

Here we manage the ROL's of each carpet kit, ensuring one of each kit is always in stock. We cut the carpet, overlock the edges and store in our facility under the airlines part number, as the aircraft type. The carpet kit is a complete aircrafts carpet requirement and given one part number to ensure stock levels are maintained.

Working directly with the carpet manufacturers to the delivery point of the maintenance hangar insures that airlines have a one-stop-shop for there all there aircrafts carpets.
